<pre>[reply] [-] Description Robinson Tryon (qubit) 2014-01-02 21:01:52 CET Many websites make small event/holiday-based tweaks to their websites. Some, such as Google, take this to an art form with 'Google Doodles', etc.. It would be great for us to have some mechanism to make it easy to add these little tweaks to our website, perhaps even scheduling them ahead of time to have them appear for a single day or a group of days. Example events: - Document Freedom Day - LibreOffice's Birthday - Software Freedom Day - Release days (especially nice: a multi-day countdown to release) - Winter Holiday/Christmas - New Year's Day - Valentine's Day Although this process is more programmatic than design-related, we might wish to consider such a system during the current Website Redesign.</pre>
