Description ticket moved from Björn Michaelsen 2012-12-13 18:24:56 CET please evaluate http://gitlabhq.com/ as a powerful self-hosted alternative to cgit/gitweb [reply] [-] Comment 1 Florian Effenberger 2012-12-15 14:19:05 CET To determine priority: Is there a concrete need, or is this simply a wishlist item? [reply] [-] Comment 2 Björn Michaelsen 2012-12-17 14:49:14 CET wishlist, as you can see from the priority I assigned ;) But if anyone gets excited over the idea, who am I to stop her/him ...	

History

#1 - 2015-10-31 15:40 - Dennis Roczek

err, ticket moved from https://bugs.documentfoundation.org/show_bug.cgi?id=58254

#2 - 2020-01-10 18:14 - Guilhem Moulin

- Status changed from New to Closed

Closing, we're using Gerrit as code review tool and deploying a Gitlab instance only for its VCS-Browser capability is way too overkill.

#3 - 2020-10-23 18:56 - Claudius Ellsel

That indeed wouldn't make too much sense. Thus I created <https://redmine.documentfoundation.org/issues/3413> proposing to move more stuff there, so it is not overkill anymore. I actually think that their workflow is better for most things.
