Infrastructure - Task #2211

greylog/log parsing

2017-04-04 13:11 - Florian Effenberger

Description
We get way too many cronjob and logrotate e-mails and should switch to a better approach. There's a test installation of greylog available, running on the Sun24 box, that needs evaluating and putting into production (or an alternative identified). That helps to better spot possible issues and reduces mail load at the same time.

History
#1 - 2017-07-18 11:24 - Florian Effenberger
- Target version changed from Q2/2017 to Q3/2017

#2 - 2017-09-13 15:26 - Florian Effenberger
- Target version changed from Q3/2017 to Q4/2017

Shifting to Q4, but then we definitely should look into that, to better manage our incoming log messages

#3 - 2018-03-15 13:54 - Florian Effenberger
Is that task the same as the monitoring ticket (#2210)?

Not exactly the same but related, and they're likely to be solved at the same time.

#6 - 2018-05-09 12:05 - Florian Effenberger
- Target version changed from Q4/2017 to Q2/2018

Is there any ETA?
I really would like to get the cronjob mails cleaned up, and have some very basic notification system in place

#8 - 2019-05-08 15:22 - Florian Effenberger
- Target version changed from Q2/2018 to Q2/2019

Any updates on this? :)

Monitoring in place
Still many e-mails each day from cronjobs and other stuff

#12 - 2021-09-14 01:38 - Guilhem Moulin
- Target version changed from Q4/2020 to Q4/2021

The point here is not to clean up mail notification, as long as infra team members are able to handle the mail flood, filter what's relevant, and order on the fly by priority there is nothing wrong with these IMHO. This task is about improving whitebox monitoring in general. This has been a recurring topic in infra calls for a while now, and we're planning to make node monitoring part of the baseline which should solve part of this.
