Description

Last year a feature was added to Translate that would allow us to skip adding the `<languages />` element to a page in order to provide language links: [https://phabricator.wikimedia.org/T64702](https://phabricator.wikimedia.org/T64702)

It seems the documentation has not been updated, but this says that there are configuration options to control the behaviour: [https://phabricator.wikimedia.org/T204076](https://phabricator.wikimedia.org/T204076)

I guess it would be good for consistency to just use the "sidebar-only" config option.

History

#1 - 2019-05-28 03:39 - Guilhem Moulin

AFAICT `$wgPageTranslationLanguageList` is a new setting from [https://gerrit.wikimedia.org/r/#/c/mediawiki/extensions/Translate/+/437062/](https://gerrit.wikimedia.org/r/#/c/mediawiki/extensions/Translate/+/437062/), which was merged to master and REL1_32. It's a no-op for us right now, as we're targeting LTS versions and are therefore on 1.31 at the moment: [https://www.mediawiki.org/wiki/Version_lifecycle](https://www.mediawiki.org/wiki/Version_lifecycle).

#2 - 2019-07-25 14:46 - Florian Effenberger

- Target version set to Qlater

#3 - 2020-08-04 18:16 - Florian Effenberger

- Target version changed from Qlater to Q3/2020

Blocking on next LTS, due ~August

#4 - 2021-01-04 11:30 - Guilhem Moulin

- Target version changed from Q3/2020 to Q1/2021

Florian Effenberger wrote:

I don't recall how come we decided to set the target to Q3 2020, but excluding point releases (bug/security fixes) we typically don't upgrade immediately after upstream releases a version.

Upgraded to 1.35 last week-end and Beluga Beluga says the new change took effect, so closing this now.

#5 - 2021-01-12 11:56 - Dennis Roczek

- Status changed from New to Feedback
- Priority changed from Normal to Low
- Target version deleted (Q1/2021)

And the change was reverted because of [https://phabricator.wikimedia.org/T47096](https://phabricator.wikimedia.org/T47096) is blocking us: in the sidebar "English" is linking to /en pages which does not include existing templates and categories, but with /en postfix.

/me is subscribed to the phabricator ticket and will respond when it is fixed.
