Hi, suddenly I have no buttons, see attached screenshot. I'm using Seamonkey 2.49.2.

I see the buttons in Chrome, but for many reasons I do not want to change my browser.

History

It has been discovered that we need to clear our browser's cached data for LibO Gerrit. Web editing also did not work due to this cache issue. I think you are facing the same problem and because your Chrome probably did not have cache history for Gerrit, it worked.

The Document Foundation Redmine schrieb am 15-Nov-20 um 09:05:
Seamonkey has no option to remove single entries from the cache, but can only empty the total cache. But calling the site with an empty cache does not solve the problem, I still have no buttons.

- Subject changed from I have no buttons e.g. Rebase, Abandon, Edit to Gerrit UI: missing Rebase, Abandon, Edit button in SeaMonkey since 3.2 release
- Category set to Gerrit

#4 - 2020-11-20 01:08 - Guilhem Moulin
- Subject changed from Gerrit UI: missing Rebase, Abandon, Edit button in SeaMonkey since 3.2 release to Gerrit UI: missing Rebase, Abandon, Edit button in SeaMonkey since upgrade to gerrit 3.2

Could it be related to SeaMonkey not supporting some newer web technologies? Looking at their release notes, it is not at all clear to me what is the core Firefox version they are tracking. They speak about picking security fixes from both Firefox 60 and 78, which sounds kind of confusing.

Ah yeah, good point. Regina Henschel, you can also try our stage instance at https://gerrit-stage.documentfoundation.org/.

The gerrit 3.1 → 3.2 upgrade includes a Polymer upgrade from 2.x to 3.x. AFAICT SeaMonkey 2.49.3 is based on Firefox 52 ESR but the Polymer 3.0 compatibility matrix doesn't mention Firefox <59: https://polymer-library.polymer-project.org/3.0/docs/browsers.

That results in "502 Bad Gateway".

Intentionally brought the stage instance back to sleep on Nov 24, 4 days after the message, this instance is in no way meant to be running at all time. Please try again — will stop it again in 24h.

That too has no buttons. And on both (gerrit.libreoffice.org or gerrit-stage.documentfoundation.org), I cannot comment patches from others.

Thanks for trying. I guess that confirms FF <52ESR (released 2017-03-07) and derivatives are unfortunately not supported.

According to https://en.wikipedia.org/wiki/SeaMonkey#Release_history the latest stable release of SeaMonkey, 2.53.5.1, is based on Firefox 60.8. Thus, it should work with Gerrit's UI based on the Polymer support table Guilhem linked to.

Regina: can you try with the latest SeaMonkey?

#12 - 2020-12-19 19:19 - Regina Henschel
I have now Seamonkey 2.53.5.1. I still have no buttons. For https://gerrit.libreoffice.org/c/core/+/107792 for example, I should have "Revert" and I should have vertical dots with "Download" and "Cherry Pick". But there is nothing.
