Description			
<p>We talked about using non-bugzilla trackers on the ESC call and decided we really don't want that for anything directly related to the code we ship -- and the rest -- most of that is related to some kind of infrastructure, so can be filed there. Here is the list of QA-related issues on bugzilla (keyed by whiteboard status TopicQA):</p> <p>QA-related issues</p> <p>If in doubt though, file your issue on bugzilla: It's the most visible tracker we have.</p> <p>Thus the "QA project" on RedMine is closed, please don't file new stuff here.</p>			

History

#1 - 2014-09-23 16:43 - Bjoern Michaelsen

Whops, missed this one previously!
IMHO, as much as possible should be on FDO -- and that means almost everything.
The only exceptions I see are:
- when there are special credentials needed
- ... (actually I can't think of anything else)

So, of the current open issues here on RM I see only [#592](#), [#593](#), [#597](#), [#606](#) qualify for that -- and all of those are actually infrastructure topics that just happen to be about infra for QA. I see those would perfectly fine fit into the infrastructure project.

As for the rest: They are much better suited to be on FDO (or wherever our bugzilla is) and a lot of them even QA-EasyHack that might generate an unsuspecting new contributor: https://wiki.documentfoundation.org/QA/Easy_Hacks

#2 - 2014-09-25 15:18 - Bjoern Michaelsen

As discussed on the ESC: <http://nabble.documentfoundation.org/minutes-of-ESC-call-td4123642.html>
+ how is redmine used for QA ? (Robinson)
+ specific admin pieces tracked in there.
+ happy to use bugzilla for that purpose
+ might already fit in the existing infra in Redmine ? (Bjoern)
+ could we merge those & close the project ?
AI: + move the data across to infra / bugzilla (Bjoern)
+ easy to do now - only 10x tasks or so.
+ sometimes there is infra not maintained by infra team (Robinson)

so waiting a few more days as a grace period and then will move issues from "Redmine/QA" to "Redmine/Infrastructure" for stuff that is about any kind of infrastructure and the rest back into the public on Bugzilla for better visibility.

#3 - 2014-09-29 17:09 - Bjoern Michaelsen

- Assignee set to Florian Effenberger

Project QA does not have any open issue anymore.

@Florian: Can we "close" this project? Ideally by making it impossible to file new stuff here, while keeping existing issues available.

#4 - 2014-09-29 17:15 - Bjoern Michaelsen

- Description updated

Ruthlessly updated description.

#5 - 2014-09-30 13:36 - Bjoern Michaelsen

- *Description updated*

#6 - 2014-10-02 10:29 - Bjoern Michaelsen

- *Project changed from 49 to Infrastructure*

- *Assignee changed from Florian Effenberger to Bjoern Michaelsen*

Moving this to infra, stealing the issue, trying to disable the tracker myself (just found the settings and I am a manager of the QA project).

#7 - 2014-10-02 10:34 - Bjoern Michaelsen

- *Status changed from New to Closed*

after 5 or 6 tries, I figured it out myself. => closing
